Member of EUROGYPSUM

THE VOICE OF THE EUROPEAN GYPSUM INDUSTRY

The European manufacturers of gypsum products, Euro-gypsum, aims to ensure the sustainable growth of the market, while contributing to the quality of construction and environmental sustainability.

The members of this European association are committed to using only 100% recyclable products and to the development of higher value-added solutions.

RECOMMENDED PRODUCTS

STRONG STAKE IN SUSTAINABILITY

Gypotec Ibérica actively contributes towards sustainable development by seeking and using eco-efficient practices and technologies, combining its growth with environmental protection. The company seeks sustainability at all levels, whether economic, social or environmental. Profits from consumed energy, producing electricity under a cogeneration system and all production is destined for export or import substitution.

YOUR PROJECT DESERVES THE BEST

Gyptec Ibérica - Gessos Técnicos, SA, a portuguese company part of the Preceram Group, has been engaged in the production of plasterboards, using clean and environmentally sustainable methods, since 2009.

The Industrial and Business Cluster of Figueira da Foz, where Gyptec is located, is part of the most complete node of traffic distribution in the central region of Portugal, where the maritime, rail and road networks are all interconnected.

A pioneer in the production of plasterboard in Portugal, Gyptec develops solutions for construction and rehabilitation, resistant to fire, impact and humidity, with high thermal and acoustic performance.

More than plasterboard, Gyptec has the solution.

Certifications

Gyptec Ibérica is certified by AENOR, according to Standard UNE-EN ISO 9001:2015, for the manufacture of gypsum laminated boards, composite boards with thermal and acoustic insulation and commercialization of support materials.

Gyptec also has the Environmental Management System Certificate, according to UNE-EN ISO 14001: 2015, which shows how Gyptec ensures a rational use of energy and resources, taking into account the prevention of the environment, legal compliance and socio-economic conditions.

Collect, recycle and reintegrate

It uses as raw materials: recycled paper and FGD gypsum. Gyptec also promotes selective collection of leftover boards, recycling and reintegrating them back into production.

Proven Quality

All products with the **Gypotec** brand or name guarantee quality and technical perfection in the various applications for which they are intended, being periodically subjected to rigorous tests and trials.

Partnerships

Gypotec Ibérica is proud to be partnered with several institutes for technology development at international level.

AENOR, the Spanish Association for Standardization and Certification, certifies that the laminate plasterboards manufactured by Gypotec Ibérica comply with Standard UNE-EN 520:2005 + A1 and with RP 35.09 of Aenor (Specific Aenor regulation for Gypsum laminated plasterboards). All products meet the requirements of the applicable standards for the purposes of CE marking.

INTERIOR AIR QUALITY

Gypotec gypsum boards are a non-combustible material, resistant to fire and impacts, and free from harmful substances and ensures a healthy indoor environment.

Gypotec gypsum boards are rated A+ for indoor air quality. This qualification comes from the French regulations for emissions of volatile pollutants, with Category A+ being the best indoor air quality classification, meaning very low or no emissions of substances in indoor air, such as VOCs (volatile organic compound).

STANDARD

Suitable for all type of interior dry construction, such as: partition and walls, wall lining, suspended ceilings, lighting and pelmet features and other decorative applications.

Board A - EN 520

Width (mm): 1200

Thickness (mm): 6 / 9,5 / 12,5 / 15 / 18

Length (mm): 2000 - 3000

HYDROPHOBIC

Gypsum board treated with a water-repellent agent to reduce water absorption. Suitable for damp or wet areas: such as kitchens and bathrooms. Can be covered with tiles or similar coating.

Board H - EN 520

Width (mm): 1200

Thickness (mm): 12,5 / 15

Length (mm): 2000 - 3000

ANTI-FIRE

Gypsum board with fiberglass to improve the fire reaction of the gypsum core. Suitable for areas requiring high fire resistance.

Board F - EN 520

Width (mm): 1200

Thickness (mm): 12,5 / 15

Length (mm): 2000 - 3000

HIGH HARDNESS

Plasterboard with higher density and impact resistance. Suitable for areas where greater impact resistance and greater acoustic comfort are required: schools, hotels, hospitals, offices, shopping centers and pavilions.

Board D - EN 520

Width (mm): 1200

Thickness (mm): 12,5 / 15

Length (mm): 2000 - 3000

FIND OUT
MORE

Laminated gypsum boards

Gypotec gypsum boards are manufactured industrially through a process of continuous lamination of a mixture of gypsum, water and additives between two sheets of cardboard.

Resistant and safe

They are a non-combustible material, resistant to fire and impacts, and free from harmful substances. Its use helps to create a healthy atmosphere and greater thermal and acoustic comfort inside buildings. It enables all kinds of finishing reflecting a perfect finish without cracking or deformations.

EPS

Board consisting of a type A plasterboard (Standard) or a type H plasterboard (Hydrophobic) and an insulating layer in Expanded Polystyrene (EPS). An affordable solution for thermal insulation of walls.

Width (mm): 1200

Thickness (mm): 29,5 / 32,5 / 39,5 / 42,5 / 49,5 / 52,5 / 62,5 / 69,5 / 72,5 / 89,5 / 92,5 / 109,5 / 112,5

Length (mm): 2500 / 2600

GYPCORK

Board made of plaster and insulation in expanded cork agglomerate (ICB). With 100% natural cork, by Amorim Insulations, it promotes sustainable construction with high thermal and acoustic performance, ideal for sustainable rehabilitation.

Width (mm): 1200

Thickness (mm): 32,5 / 52,5 / 72,5

Length (mm): 2000 / 2500

Protect

Board coated with a special fiberglass fabric instead of traditional paper, which gives it excellent resistance to moisture and A1 fire reaction rating.

Width (mm): 1200

Thickness (mm): 12,5

Length (mm): 2000 / 2400

Maximum Protection

The Gyptec Protect board ensures maximum protection for sensitive areas that need extra and specific care and where the use of traditional plasterboard sheets is not recommended, namely, areas that need high fire resistance, very damp areas and those with occasional exposure to water.

Where to apply:

Wall lining and partition walls:

Kitchens, locker rooms, showers, pools, spa and toilets.

Exterior coatings:

Balconies, porches, overhangs, very damp areas and those with occasional exposure to water.

Efficient and Affordable

In the construction or rehabilitation of buildings, the adoption of the most appropriate solutions is a key factor for good energy efficiency. Apart from the savings in labour, the application of value-added Gyptec boards significantly reduces energy requirements for heating and cooling buildings, thus reducing the consequent energy consumption and costs.

Effective and Versatile

Helps change indoor modulation of buildings, adapting it to modern architecture. The dry construction system is a fast, clean, economical and environmentally sustainable method for modernizing buildings. Gyptec laminated plasterboards are certified and internationally recognized for their excellent quality. They are the ideal solution both for new construction and for rehabilitation.

PROFILES AND ACCESSORIES

We offer a wide range of profiles and metal accessories for dry construction.

GR2, GR4 AND GS24 JOINT FILLER AND GA ADHESIVE GLUE

GR2, GR4 and GS24 are suitable for the treatment of joints in between laminated plasterboards, bonding bands and finishing coats. Adhesive GA powder is suitable for bonding together laminated plasterboards, joint filling, and small imperfections. Gyptec joint fillers and adhesive glues are suitable for all kind of dried work indoors, such as: partition and walls, wall lining, ceilings, crown moulding lighting and other decorative elements.

VOLCALIS MINERAL WOOL

Volcalis mineral wool is an ecological product based on sand and binder of biological origin, made in Portugal, available in rolls and slabs, with high thermal and acoustic performance, fire resistant, easy to apply and to handle.

This product of growing demand in the construction sector comes to increase the wide range of solutions offered by the Preceram Group companies and, more directly, to complement the gypsum board systems of Gyptec Ibérica.

Comfort now it's easier.

Available in three ranges:

EASY
λ40

Volcalis EASY, mineral wool roll with or without coating. Light and easy to apply, with good thermal and acoustic performance.

COMFORT
λ37

Volcalis COMFORT is suitable for multiple applications, ideal for increasing the thermal and acoustic comfort of buildings.

ALPHA
λ35

Volcalis ALPHA, mineral wool with improved performance. Non-combustible, of very low thermal conductivity, and excellent acoustic performance.

Partition and Wall

According to the envisaged final thickness and desired insulation characteristics the most suitable type of system to be employed can be chosen: simple with higher fire resistance, with or without insulation.

In areas of greater demand, more complex systems are used, with reinforced structure and double or triple boards.

SIMPLE PARTITION

Designation DIVISÓRIA 120 BA13A
Reference GDIV-0113A-BA13

Thickness: 120 mm **Acoustic isol.:** $R_w = 51$ dB
Maximum height: 3,85 m **Resis. to fire:** EI 60

Structure with horizontal 'U' Channel 70 and vertical 'C' Stud 70 metal profiles, spaced every 600 mm apart, to which 2 layers of Gyptec BA13A (STANDARD) boards are fixed on both sides. Volcalis ALPHA Mineral Wool in the air space.

DOUBLE PARTITION 48

Designation DIVISÓRIA DUPLA 176 BA13A
Reference GDIV-0126A-BA13

Thickness: 176 mm **Acoustic isol.:** $R_w = 59$ dB
Maximum height: 5,30 m **Resis. to fire:** EI 60

Two independent structures with horizontal 'U' Channel 48 and vertical 'C' Stud 48 metal profiles, spaced every 600 mm apart, on which two layers of Gyptec BA13A (STANDARD) boards are fixed on both outer sides. Connection between structures. Volcalis ALPHA Mineral Wool in the air space.

DOUBLE PARTITION 70

Designation DIVISÓRIA DUPLA 220 BA13A
Reference GDIV-0125A-BA13

Thickness: 220 mm **Acoustic isol.:** $R_w = 67$ dB
Maximum height: 3,20 m **Resis. to fire:** EI 60

Two independent structures with horizontal 'U' Channel 70 and vertical 'C' Stud 70 metal profiles, spaced every 600 mm apart, to which 2 layers of Gyptec BA13A (STANDARD) boards are fixed on both outer faces. Volcalis ALPHA Mineral Wool in the air space.

Application

Cover the 'U' Channel with acoustic tape and secure them to the floor and ceiling. Make sure they are aligned. Do likewise with the side 'C' Studs. Fit the intermediate 'C' Studs with the recommended spacing (400 or 600 mm). Attach the boards on one side of the wall with PM screws and apply the insulation. Screw the boards on the opposite side. If it is a dual board solution, secure with staggered joints.

finishing**

**Increases thermal and
acoustic comfort**

ANTI-FIRE PARTITION

Designation DIVISÓRIA 100 BA15F
 Reference GDIV-1108F-BA15

Thickness: 100 mm **Acoustic isol.:** $R_w = 45$ dB
Maximum height: 3,20 m **Resis. to fire:** EI 60

Structure with horizontal 'U' Channel 70 and vertical 'C' Stud 70 metal profiles, spaced every 600 mm apart, to which 1 layer of Gyptec BA15F (ANTI-FIRE) boards are fixed on both sides. Volcalis ALPHA Mineral Wool in the air space.

PROTECT PARTITION

Designation DIVISÓRIA 120 BA13Protect
 Reference GDIV-0134Protect-BA13

Thickness: 120 mm **Acoustic isol.:** $R_w = 51$ dB
Maximum height: 3,85 m **Resis. to fire:** EI 180

Structure with horizontal 'U' Channel 70 and vertical 'C' Stud 70 metal profiles, spaced every 600 mm apart, to which 2 layers of Gyptec BA13 PROTECT boards are fixed on both sides. Volcalis ALPHA Mineral Wool in the air space.

 the Gyptec objects

Did you know that you can improve the energy efficiency of a building?

Gyptec plasterboards allow you to rehabilitate and upgrade any building, contributing to the reduction of energy consumption, and improving comfort levels. Gyptec dry construction systems are fire and impact resistant, and have excellent thermal and acoustic insulation capabilities.

Did you know that you can paste tiles and hang objects on Gyptec boards?

Gyptec plasterboards may receive various types of finishing such as paint, wallpaper and tiles. In wet areas, we recommend the use of Water-Resistant Boards. To attach objects up to 15 kg to the Gyptec boards, simply use a suitable bushing for that purpose. Heavier objects, such as a closet, can be directly attached onto the metal profiles that are easily detectable with a magnet.

Wall Lining

One of the most practical and efficient ways to recover existing buildings, or as a root solution for new projects. Which system to recommend depends on the conditions of the wall and on the intended insulation.

The boards can be applied with a metal support structure

HYDROPHOBIC WALL LINING

Designation REVESTIMENTO 63 BA15H
Reference GREV-1101H-BA15

Thickness: 63 mm **Acoustic isol.:** $R_w = 18$ dB
Maximum height*: 2,10 m

Self-supporting structure with horizontal 'U' Channel 48 and vertical 'C' Stud 48 metal profiles, spaced every 600 mm apart, to which 1 layer of Gyptec BA15H (HYDROPHOBIC) boards are fixed. Volcalis ALPHA Mineral Wool in the air space.

* distance between reinforcements or connections

SIMPLE WALL LINING

Designation REVESTIMENTO 73 BA13A
Reference GREV-0102A-BA13

Thickness: 73 mm **Acoustic isol.:** $R_w = 20$ dB
Maximum height*: 2,50 m **Resis. to fire:** EI 30

Self-supporting structure with horizontal 'U' Channel 48 and vertical 'C' Stud 48 metal profiles, spaced every 600 mm apart, to which 2 layers of Gyptec BA13A (STANDARD) boards are fixed. Volcalis ALPHA mineral wool in air space.

* distance between reinforcements or connections

ANTI-FIRE WALL LINING

Designation REVESTIMENTO 100 BA15F
Reference GREV-1102F-BA15

Thickness: 100 mm **Acoustic isol.:** $R_w = 21$ dB
Maximum height*: 3,20 m **Resis. to fire:** EI 60

Self-supporting structure with horizontal 'U' Channel 70 and vertical 'C' Stud 70 metal profiles, spaced every 600 mm apart, to which 2 layers of Gyptec BA15F (ANTI-FIRE) boards are fixed. Volcalis ALPHA mineral wool in air space.

* distance between reinforcements or connections

Application with self-supporting structure

An auxiliary structure fixed to the wall or self-supporting can be used - as in the example on the right. Follow the application instructions for partition walls on page 8.

See more wall lining solutions in **SOLUTION MANAGER**

Easy installation of pipes and ducts

Enhanced mechanical support

Better fastening on degraded walls

Or fixed directly to the wall with Omega profiles or GA GLUE

GA GLUE

Supplied in bags of 20 kg. Usage time approximately 1h50. Depending on the support conditions, the glue consumption varies between 2,5 and 5 kg/m².

See all Gypotec solutions and systems at **SOLUTION MANAGER**

GYPCORK WALL LINING

Designation REVESTIMENTO 83 ICB 13-40
Reference GREV-0403A-BA13

Thickness: 83 mm

Acoustic isol.: $R_w = 9$ dB
Resis. to fire: N/A

OMEGA 33 metal profiles fixed directly to the wall, spaced every 600 mm apart, to which 1 layer of composite Gypotec ICB 13-40 (GYPCORK) boards are fixed.

HYDROPHOBIC WALL LINING

Designation REVESTIMENTO 25 BA15H
Reference GREV-1001H-BA15

Thickness: 25 mm

Acoustic isol.: N/A
Resis. to fire: N/A

A layer of Gypotec BA15H (HYDROPHOBIC) boards glued directly to the wall face with GA GLUE dots.

Dry construction system

The dry construction system is a fast, clean, economical and environmentally sustainable method for modernizing buildings. The use of laminated plasterboard can create a healthy atmosphere by changing the indoor modulation of buildings, adapting them to modern architecture, while providing greater thermal and acoustic comfort.

Direct application

Apply the glue dots, on the board or directly on the wall, 40 cm apart, reinforcing the perimeter of each board. Fix the board 1 cm away from the floor using shims to ensure that it does not come into contact with moisture. Press the boards to ensure a good adhesion to the support, checking that the surface is flat and straightened with a ruler. Remove shims after drying.

Increases interior comfort

Contributes to energy savings

Provides a perfect finish with no cracks or moisture

Versatile in its application

Ideal for uneven surfaces

Ceiling

They are easy to apply, simplify the execution of electrical installations and air conditioning, and have greater aesthetic value.

According to the project and the desired insulation, we can use: simple suspended boards, with the insulation glued to the ceiling or with interposed insulation.

SIMPLE CEILING

Designation TETO 38 BA13A
Reference GCDS-0101A-BA13

ACOUSTIC ISOLATION

Aerial sounds:
Rw = 64 dB
 Δ Rw = 12 dB

Percussion sounds:
Ln, r,w = 61 dB
 Δ Lw = 17 dB

Structure with F530 horizontal metal profiles separated every 500 mm, suspended by vertical elements fixed to the ceiling, to which 1 layer of BA13A (STANDARD) boards are fixed. Volcalis ALPHA mineral wool in air space.

DOUBLE CEILING

Designation TETO 75 BA13A
Reference GCDS-0104A-BA13

ACOUSTIC ISOLATION

Aerial sounds:
Rw = 66 dB
 Δ Rw = 14 dB

Percussion sounds:
Ln, r,w = 57 dB
 Δ Lw = 21 dB

Structure with F530 horizontal metal profiles and Suspension Rule, spaced every 500 mm, suspended by vertical elements fixed to the ceiling, to which 2 layers of Gyptec BA13A (STANDARD) boards are fixed. Volcalis ALPHA mineral wool in air space.

PROTECT DOUBLE CEILING

Designation TETO 92 BA13Protect
Reference GCDS-0105Protect-BA13

ACOUSTIC ISOLATION

Aerial sounds:
Rw = 71 dB
 Δ Rw = 21 dB

Percussion sounds:
Ln, r,w = 54 dB
 Δ Lw = 24 dB

Structure with F560 primary horizontal metal profiles 750 mm apart, and F560 secondary horizontal metal profiles 500 mm apart, suspended by vertical elements fixed to the ceiling, to which 2 layers of Gyptec BA13 PROTECT boards are fixed. Volcalis ALPHA mineral wool in air space.

Application

Mark the final position on the side walls with a finishing profile (angle support or fin). Attach and level the profile to the ceiling using, for example, threaded rod pivots. There are other ways for attaching the boards, depending on the support. Apply the boards with staggered joints.
