PERFORATED BOARD

Gyptec Vogl

High-performance acoustic ceilings without any visible joints

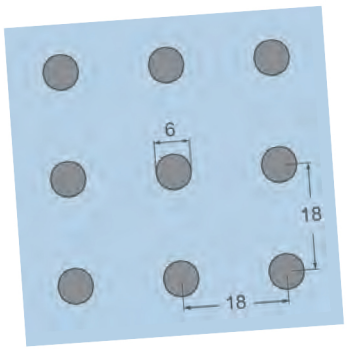
This ceiling system, besides absorbing noise and enabling ventilation, also offers complete freedom of design, satisfying the most demanding expectations with respect to aesthetic and interior decoration.

There are 12 different combinations of drilled holes and design, enabling the design of curved and flat ceilings, with complete freedom of design.

Comprising a perforated plasterboard and a black acoustic veil on the back side, which absorbs high frequencies and prevents the fall of dust, perforated Gyptec Vogl boards are supplied ready to use.

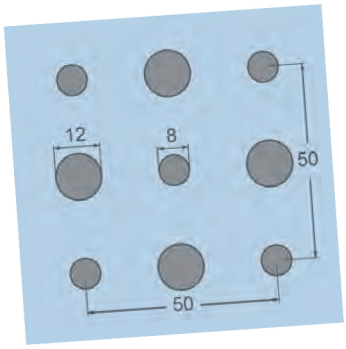
Gyptec Vogl 6/18R

also in 8/18R, 10/23R, 12/25R and 15/30R



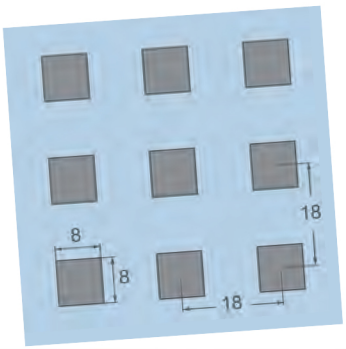
Gyptec Vogl 8/12/50R

also in 12/20/66R, 12/20/35R and 8/15/20R

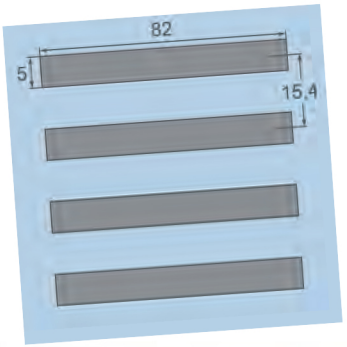


Gyptec Vogl 8/18Q

also in 12/25Q



Gyptec Vogl 5/82/15.4SL



Advantages

Simple and quick **edge-to-edge** assembly.

Straight edge panels facilitate the alignment.

There is **no need tape.**

Joint Filler

Product quick setting. Especially recommended for joints of the perforated board.
